# Sushant Neupane

Melbourne, VIC, Australia nsushant09@gmail.com +61470606448 in/nsushant09 www.nsushant.com.np

## EDUCATION

### Master of Information Technology (Specialization in Artificial Intelligence)

La Trobe University • Melbourne, VIC, Australia • 2027

### BSc (Hons) Computing

The British College (Degree awarded by Leeds Beckett University, UK) • Kathmandu, Nepal • 2024

- Awarded the Student Excellence Award for outstanding performance in academics and extracurricular involvement

## SKILLS

**Languages:** Kotlin, Java, JavaScript, TypeScript, C#, SQL, HTML, CSS, Python
**Frontend/Mobile:** Android SDK, Jetpack Compose, XML, SwiftUI, React Native, HTML, CSS
**Backend & Cloud:** Spring Boot, RESTful APIs, Microservices, Firebase (BaaS, Firestore), AWS (EC2, RDS, Route53), Docker, Jenkins, CI/CD
**Architecture & Testing:** MVVM, Clean Architecture, Multi-module Architecture, Dependency Injection, JUnit, Espresso, Test-Driven Development (TDD)
**Tools & Platforms:** Android Studio, Gradle, Unity, Figma, Git, Google Play Console, App Store Connect

## EXPERIENCE

### Academic Tutor (CSE2UI: User Interface Design)

**La Trobe University** **June 2026 - Present，Melbourne, VIC, Australia**

- Led practical workshops and interactive lab sessions on UI/UX engineering, design thinking and rapid prototyping for 120+ undergraduate students.
- Guided students through Figma wireframing, interactive prototyping, and heuristic usability testing to identify usability bottlenecks and validate design decisions prior to code execution.
- Redesigned and extended 4 lab exercises beyond the standard curriculum, tailoring activities to better address common student struggles with UI/UX concepts.

### Graduate Research Assistant

**La Trobe University** **March 2026 - Present，Melbourne, Australia**

- Designed real-time WIP algorithms combining eye-gaze tracking and body kinematics, computing user velocity proportional to focal distance, leg cadence, and arm swing.
- Built a functional VR prototype in Unity to test the WIP locomotion algorithm with 20 participants, evaluating usability and comfort.
- Co-authored "Look to Pace: Gaze-Supported Speed Adjustment for Walking-in-Place Techniques in Virtual Reality" submitted to IEEE VR 2027.

### Software Engineer

**I.T. Security College of Computer Studies** **October 2024 - November 2025，Kathmandu, Nepal**

- Led migration of native Android and iOS codebases to Kotlin Multiplatform (KMP), using Gradle product flavors and a Multi-module Architecture to power white-label deployments across 12+ educational institutions.
- Conducted testing across multiple frameworks and managed release deployment to both Google Play Store and Apple App Store, applying code obfuscation techniques and reducing app size by ~25% for production builds.
- Integrated Firebase as a Backend-as-a-Service (BaaS), implementing Push Notifications and Analytics to support user engagement and app health monitoring.

### Research Intern

**Hochschule Zittau/Görlitz** **June 2024 - August 2024，Zittau, Germany**

- Developed a RESTful API backend using Spring Boot, backed by a relational SQL database, and deployed as microservices on AWS (EC2, RDS, Route53) with Jenkins automating the CI/CD build and deployment pipeline.
- Built a hands-free, voice-controlled cross-platform application using TypeScript and React Native for the RealWear Navigator 520 smart glasses, streamlining warehouse operations including task assignment to robots and inventory management.
- Built a functional 3D CAVE environment prototype in Unity using C#, following Clean Code principles and Object-Oriented Design (OOP).

### Android Developer Intern

**F1Soft International** **September 2022 - February 2023，Kathmandu, Nepal**

- Built pixel-perfect frontend interfaces deployed across 50+ financial institutions, using a combination of XML and Jetpack Compose, developed in both Kotlin and Java.
- Applied MVVM and Clean Architecture depending on module requirements, implementing Dependency Injection with frameworks including Dagger/Hilt.
- Collaborated within an Agile team, gaining hands-on exposure to unit testing and Test-Driven Development (TDD), achieving ~70% test coverage using JUnit and Espresso.
